SKILLS

- Python (Flask)
- Python Scripting (Selenium, BeautifulSoup)
- Java (JUnit)
- C/C++
- SQL (MySQL, SQLite)
- Git (GitHub CD/CI)
- Development tools: GitHub, Azure, VS Code, IntelliJ IDEA
- HTML, CSS, JavaScript (ReactJS, NodeJS)
- Collaboration and Teamwork

EDUCATION

Sahibzada Zorawar Singh
Public School Nadala,
Punjab, India
2021-2022
High School Diploma

University of Victoria
2023-2027
BSc in Computer Science

PROFILE

As a dedicated BSc Computer Science student, I aspire to become a versatile software engineer. In my ongoing journey of skill enhancement, I've delved into various aspects of technology. I've showcased my proficiency in Python, Flask, React, Git, Linux, and Java through projects like a real-time chat app and a robust Todo List application. This diverse skill set positions me for impactful contributions across the spectrum of full-stack development. I am eager to continue learning and growing in this field.

PROJECTS

BrightDash

BrightDash is a Python script I developed for automated access to Brightspace. It uses Selenium to efficiently navigate the login process, saving users time to login into Brightspace and enhancing their experience by providing quick, hassle-free access to academic resources.

Room Chat

A real-time chat application using frontend technologies coupled with Python Flask as the robust backend. The tech stack is based on HTML, CSS, JavaScript with the custom Styled components, connected to a Flask backend, with data stored in MySQL.

Todo-App

It represents a comprehensive task management application imbued with the capability to seamlessly add, update, and delete tasks. Executed through the integration of Flask and SQLAlchemy, this project proficiently handles data storage and updates.

BudgetBuddy

It is a Python script I developed to streamline online shopping on Amazon. It's tailored to user preferences, seeking products within a set budget range. When a match is found, it sends an email notification with the product link.
